

Just One Cut?

Can any shape with straight sides be made by folding a single piece of paper and by making a single complete cut?

Watch the videos by clicking the following link to find out more:

Why don't you have a go at folding a piece of paper and cutting out a triangle with just one straight cut, as Katie suggests?

Can you create a hexagon in the same way?

What other shapes can you create by folding and making just one straight cut?
